

Log4shell

On December the 9th, 2021, Apache published a severe vulnerability called [Log4shell](#) (and other Log4j-related vulnerabilities).

Download

How to scan your services quickly, basically with log4j-scan from fullhunt, but using cisagov:

```
git clone https://github.com/cisagov/log4j-scanner.git
cd log4j-scanner/
```

Requirements

- python
- python-requests
- python-termcolor
- python-pycryptodome

Create a url list

The easiest way is to create a list of all URLs you want to check:

```
nano urls.txt
```

```
https://techsaviours.org
https://meet.techsaviours.org
https://searx.techsaviours.org
```

Check your urls

```
python log4j-scan.py -l urls.txt --waf-bypass --run-all-tests
```

or just a url

```
python log4j-scan.py -u https://techsaviours.org --waf-bypass --run-all-tests
```
